MOHAMMED SAHIL TAGALA

089 200 1907 | sahiltagala1@gmail.com | linkedin.com/in/sahil-tagala | github.com/sahiltagala1

Profile

Software Engineer and Data Science graduate with 2 years of production experience at Numocity Technologies building scalable backend systems and data pipelines. Proficient in Python, Java, JavaScript, and C++ with hands-on experience in machine learning, end-to-end ML pipelines, and AI development. Recently completed an MSc in Data Science at TU Dublin. Seeking graduate roles in software engineering or data science in Ireland.

Technical Skills

Programming:	Python, Java, JavaScript, Node.js, C++, RESTful APIs
Data Science & ML:	Scikit-learn, XGBoost, LSTM, SHAP, Pandas, NumPy, PySpark, SQL
Databases:	MongoDB, MySQL, Redis, SQL, NoSQL
Tools & Platforms:	Docker, Git, CI/CD, Linux, Azure DevOps, Agile, Unit Testing

Work Experience

Software Engineer *Jun 2023 - Jan 2025*

Numocity Technologies, Bengaluru, India

- Built and maintained scalable backend services for EV charging platforms using Node.js, Python, and MongoDB, ensuring high reliability across distributed systems
- Implemented OCPI protocol integrations between Numocity's Charge Management System and external network operators, designing reliable data flows and handling async communication in production
- Automated real-time monitoring and alerting workflows with Bull Queue and Redis, improving system observability and reducing incident response times
- Debugged critical production issues under tight deadlines through systematic log and metric analysis, implementing permanent fixes and documenting resolution procedures
- Delivered clean, well-tested features through agile sprints, code reviews, and close collaboration with QA and product teams
- Mentored junior team members during onboarding and contributed to internal documentation to improve team knowledge sharing

Software Engineer Intern *Feb 2023 - May 2023*

Numocity Technologies

- Built and optimised RESTful APIs, improving system performance and customer usability
- Enhanced CMS features based on stakeholder feedback and refactored legacy codebase for improved maintainability
- Developed unit test cases using Mocha and Chai, ensuring robust and reliable feature delivery
- Took initiative in documenting API endpoints and integration flows, improving clarity for the wider development team

Projects

MSc Dissertation: Explainable Anomaly Detection in EV Charging Infrastructure | *Python, LSTM, SHAP*

- Built an end-to-end ML pipeline combining LSTM deep learning with SHAP interpretability to detect and explain anomalous patterns in real-world infrastructure data at scale
- Applied time-series feature engineering, sequence modelling, and rigorous cross-validation evaluation methodology
- GitHub: github.com/sahiltagala1/ev-charging-anomaly-detection

Customer Churn Prediction System | *Python, XGBoost, Scikit-learn, Pandas, Streamlit*

- Built end-to-end predictive analytics pipeline on 7,000+ records, comparing 4 classifiers with rigorous evaluation (ROC-AUC 0.891) and SMOTE for class imbalance
- Deployed interactive Streamlit dashboard translating model outputs into clear business insights
- GitHub: github.com/sahiltagala1/churn-prediction

Education

Technological University Dublin, Ireland *Sep 2025 - Aug 2026*

MSc in Computing (Data Science) | 2nd Class Honours, 1st Division | GPA: 3.4/4.0

Relevant Coursework: Machine Learning, Big Data Analytics, Statistical Analysis, Data Mining, Deep Learning

Dayananda Sagar Academy of Technology & Management, India *Sep 2019 - May 2023*

B.E. in Computer Science | CGPA: 8.06/10.0
